

PhotoMall Project Setup Guide

Step 1: Install Required Software

Before you start, install these applications on your computer using official websites.

Node.js (version 18 or higher) Python (version 3.10 or higher) PostgreSQL (version 14 or higher)
Git

```
node --version
npm --version
python --version
psql --version
git --version
```

Step 2: Download the Project

```
git clone https://github.com/govindgautam/photomall.git
cd photomall
```

Step 3: Set Up the Backend

```
cd backend
python -m venv venv
```

Activate the virtual environment:

```
# Windows
venv\Scripts\activate

# Mac/Linux
source venv/bin/activate

pip install -r requirements.txt
```

Create a .env file inside backend folder and add:

```
DATABASE_URL=postgresql://postgres:yourpassword@localhost:5432/photomall
SECRET_KEY=your-super-secret-key-change-this
JWT_ALGORITHM=HS256
ACCESS_TOKEN_EXPIRE_MINUTES=1440

SMTP_SERVER=smtp.gmail.com
SMTP_PORT=587
SENDER_EMAIL=your-email@gmail.com
SENDER_PASSWORD=your-app-password

BACKEND_URL=http://localhost:8000
FRONTEND_URL=http://localhost:3000
```

Set up PostgreSQL database:

```
psql -U postgres
CREATE DATABASE photomall;
\q
```

```
python -c "from database.db import Base, engine; Base.metadata.create_all(bind=engine)"
```

Step 4: Set Up the Frontend

```
cd photomall/frontend
npm install
```

Create .env.local file inside frontend:

```
NEXT_PUBLIC_BACKEND_URL=http://localhost:8000
```

Step 5: Configure Email for OTP (Optional)

Generate Gmail App Password and paste into SENDER_PASSWORD in backend/.env

Step 6: Run the Application

Run backend and frontend in separate terminals

```
# Backend
cd photomall/backend
venv\Scripts\activate
uvicorn app.main:app --reload --host 0.0.0.0 --port 8000

# Frontend
cd photomall/frontend
npm run dev
```

Step 7: Access the Application

Main page: <http://localhost:3000/auth>

Admin dashboard: <http://localhost:3000/admin>

Guest portal: <http://localhost:3000/portal/19>

Step 8: First Time Usage

Create admin account, login, then create events and upload photos.

Step 9: Troubleshooting

```
localStorage.removeItem('access_token');
location.reload();
```

If OTP not received, check backend terminal.

If port busy, change ports:

```
uvicorn app.main:app --reload --port 8001
npm run dev -- -p 3001
```

For face search, upload at least 10 photos.
